

ZERO PHASE PROJECT: HOW TO AVOID MISTAKES THAT COST A FORTUNE

3KEYS is a global T&T expert and has implemented projects in different countries, industries, and companies. **The bottom line:** Companies tend to massively underestimate the influence of T&T on their business. This could lead to dramatic consequences and potentially threaten critical business operations in the case of a compliance-based T&T introduction.

To set 3KEYS clients on the right track, our initial consulting product focuses on the first and the most important steps, questions, and lessons learned, so our clients can be well prepared to tackle their first T&T implementation.

"Zero Phase" answers the following questions:

What is T&T?

What do T&T requirements mean for the company's business processes?

How does T&T affect partners and the supply chain in general?

What is a realistic timeline to implement T&T?

What are the implementation options?

What are the risks?

What are the valid requirements for hardware and software solutions on the market?

What are the benefits beyond compliance?

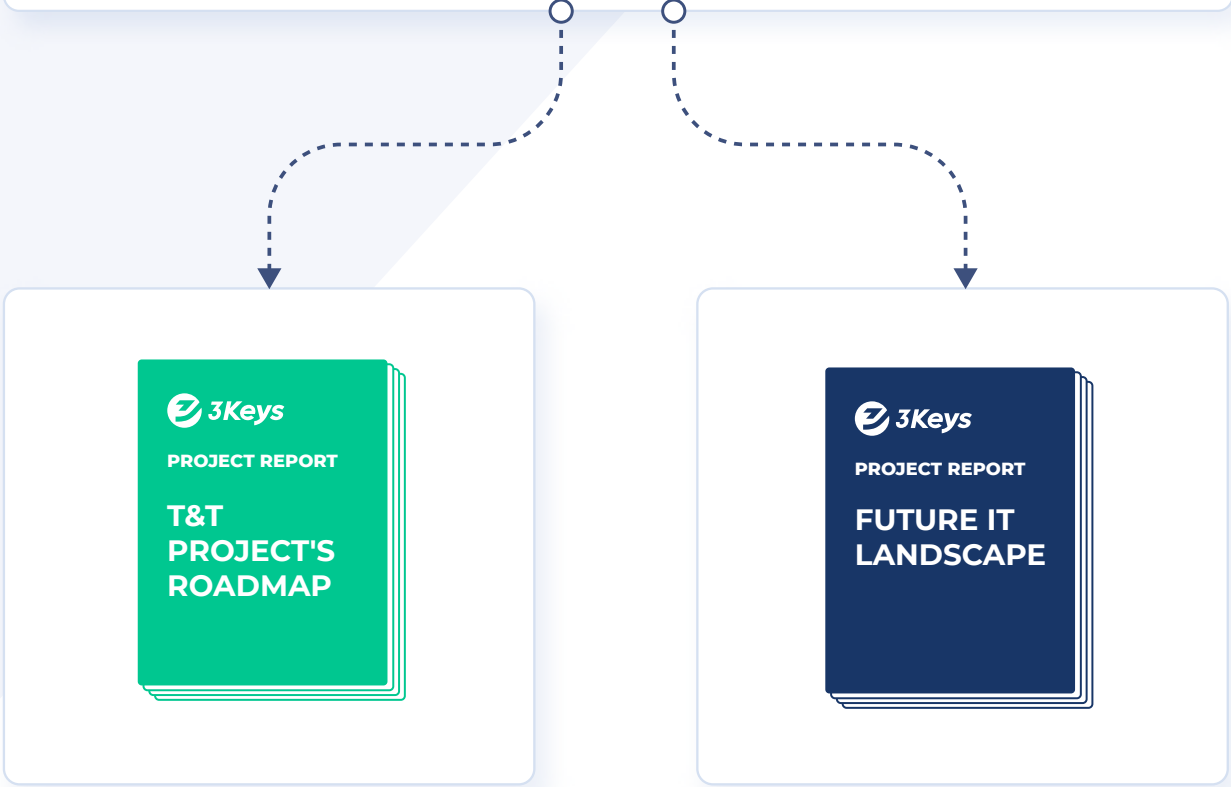

**HOW DOES TRACK & TRACE AFFECT YOUR BUSINESS PROCESSES
AND YOUR WHOLE SUPPLY CHAIN?**

As a result – your company will be well prepared for the partner selection process and T&T implementation project in general:

- ✓ T&T regulations will be clarified
- ✓ Impact on business processes and systems will be indicated
- ✓ Business processes' gaps and risks will be detected
- ✓ Analysis of possible solutions will be made in order to cover risks and gaps

Analysis outputs will be transformed into:

T&T PROJECT'S ROADMAP WILL BE CREATED WITH PROJECT TIMELINES AND PRELIMINARY COSTS ESTIMATION

FUTURE IT LANDSCAPE WILL BE DEFINED

Project plan

1. PROJECT INTRODUCTION — WORKSHOP/WEBINAR
